

j Attainment with EI minus attainment with greedy, per surrogate

MFGP row: 40 seeds · TL rows: 20 seeds (42-61) · positive = EI attains more

Color scale: $\bar{\mu} - \text{greedy (attainment)}$ from -0.20 to 0.20.

a-i: mean $\pm$ s.e. over 40 seeds (42-81); FreeSolv MFGP EI n = 39 (one failed fit). Budgets as in Fig. 1 except Matbench-gap at 20.

j: paired difference per seed, then averaged; TL rows 20 seeds (42-61); FET = Curriculum run, KD and PL identical.
