

Each point is one surrogate: mean attainment $\pm$ s.e. over seeds (Fig. 1) against its held-out LF calibration error averaged over the refits of the loop.

TL: TL-base = base transfer-learning surrogate · TL-Ptj = pretrain-then-joint · TL-E2E = end-to-end joint · TL-SPS = soft parameter sharing · TL-MMD = domain adaptation (MMD)

GP: GP-base = autoregressive multi-fidelity GP (MFGP) · GP-SV = sparse variational MFGP · GP-DKL = deep-kernel GP
