

j Attainment with EI minus attainment with greedy, per surrogate

MFGP row: 40 seeds · TL rows: 20 seeds (42-61) · positive = EI attains more

a-i: mean $\pm$ s.e. over 40 seeds (42-81); FreeSolv MFGP EI $n = 39$ (one failed fit). Budgets as in Fig. 1 except Matbench-gap at 20.

j: paired difference per seed, then averaged; TL rows 20 seeds (42-61).
